Preface

Way back in mid-1980's, a small Mechanical Engineering Workshop was set up as a part of SIAM Garage at Al Burhama in Sanabis. Since then, the Workshop enlarged its operations by opening separate branches at Arad, Salmabad and Hamad Town. All these branches cater to the needs of hundreds of customers.

Our Mission

We strive hard at all times to meet the myriad demands of our customers and earn their goodwill and trust. We always keep in view the interest of all stakeholders with excellent work practices.
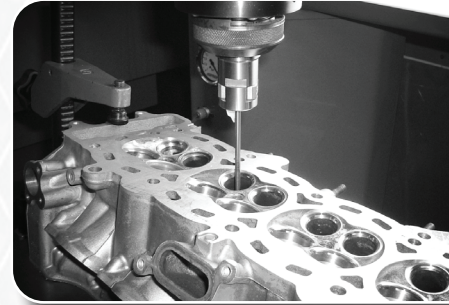

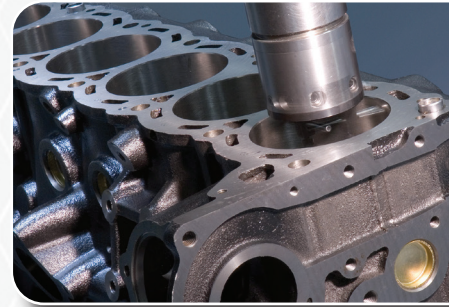

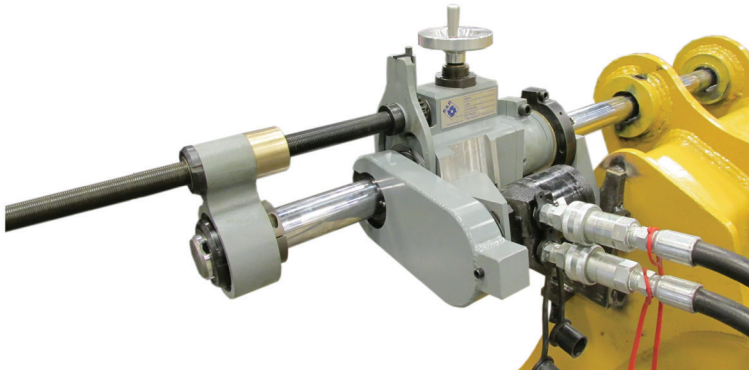

Our clientele

Our clientele includes dozens of heavy and medium industries besides hundreds of big and small garages. Over the years, we have built up a good reputation as a leading engineering workshop in the Kingdom of Bahrain.

Our Core Activities

We have a dedicated and committed technical staff and workers, who are well trained and experienced in their area of work.

We carry out activities like cylinder block boring, crankshaft grinding, cylinder head seat cutting, cylinder head tappet setting, aluminium

welding & facing, brake disc and drum facing (for both small and heavy vehicles), all kinds of lathe works, fuel injection calibration and nozzle grinding, petrol injector servicing with spare parts etc.

All our workshops carry out engine rebuilding jobs for all types of light and heavy vehicles. We also use cylinder liners made to different specifications and tolerances.

We also have facilities for fabrication jobs, inline boring of booms, arms, buckets etc.
